Sharan Venkatesh

+1 (857) 421-8084 | sharanvenkatesh09@gmail.com | linkedin.com/in/sharanvenkatesh | sharanvenkatesh.github.io | Seattle, WA

EDUCATION

Northeastern University | Boston, MA **March 2026**
Master of Professional Studies in Analytics (Applied Machine Intelligence)

B.M.S. College of Engineering | Bengaluru, India **August 2022**
Bachelor of Engineering in Information Science and Engineering

PROFESSIONAL EXPERIENCE

Street Care (Bright Mind Enrichment) | Seattle, WA (Remote) **June 2026 – Present**
Data Analyst (Volunteer) · Co-Lead, External Collaborations

- Cross-referenced the team's outreach tracker against the full alumni database and found that **97% of alumni** had never been engaged, a finding now driving the design of a **4-factor prospect scoring framework** (tenure, weekly hours, role seniority, recency) to prioritize the untapped base.
- Redesigning the outreach tracker in Google Sheets into a **stage-by-stage funnel model** with dated milestones to measure reply, meeting, and conversion rates as outreach expands.
- Co-lead a **4-person** External Collaborations team running alumni re-engagement, managing the outreach pipeline and flagging alumni ready for CEO meetings to donate or return as volunteers.

Sarada Technologies | Chennai, India
Data Analyst **June 2023 – May 2024**

- Segmented **100K+ inactive prepaid subscribers** for a regional telecom client using SQL, analyzing recharge frequency and engagement trends to drive a personalized win-back campaign that achieved an **18% reactivation rate** and a **20% month-over-month increase** in new activations.
- Identified high-churn customer segments through **predictive analytics** using Python, informing a retention-focused loyalty program that **reduced churn by 10%** and improved customer satisfaction by 4%.
- Established an **A/B testing framework** to guide holiday campaign design and targeting, increasing revenue from new-customer conversions by **25%**.

Data Analyst Intern **October 2022 – May 2023**

- Extracted and analyzed engagement indicators (recharge frequency, usage trends, call activity) in SQL to help build the team's churn forecasting model, improving churn prediction accuracy by **25%** and enabling proactive retention outreach.
- Contributed to a **demand forecasting model** built on historical activation patterns, supporting SIM inventory planning that **improved inventory accuracy by 20%** and reduced stockouts during peak enrollment periods.
- Standardized dashboard design patterns and reporting templates in Tableau across the Customer Lifecycle and Growth Analytics teams, improving reusability and **reducing report development time by 20%**.
- Built and presented **Weekly and Monthly Business Reviews** in Tableau and Excel, tracking activation, retention, and revenue KPIs across customer segments to guide executive stakeholder decisions.

ACADEMIC PROJECTS

GenAI Travel Analytics Platform | RAG, LLM, LangChain, Kubernetes **December 2025**

- Engineered a **"hallucination firewall"** in a LangChain RAG pipeline that validates user queries against official FIFA schedules, blocking responses about invalid matches or dates before generation.
- Orchestrated a **fault-tolerant microservices architecture** on Kubernetes (Minikube) with self-healing pods, cutting failure recovery time from **15+ minutes to under 10 seconds**.
- Deployed the ELK Stack (Elasticsearch, Filebeat, Kibana) to capture real-time application logs, building **Kibana dashboards** that tracked user search intent and API latency.

Boston 311 Service Requests Analysis | R, Linear & LASSO Regression **February 2025**

- Analyzed **1.3M Boston 311 service requests (2018–2022)** in R, building a reproducible pipeline from five yearly city datasets to model resolution time by request type, department, neighborhood, and submission channel.
- Found resident app reports closed in a median of **9 hours vs. 2.6 days** for phone calls, but regression showed the gap was driven by request type, not channel; only City Worker App requests stayed faster (**~169 hours**) after controls.
- Showed average resolution time fell **~72 hours/year ($p < 0.001$)** while the median held at 12–16 hours, revealing that gains came from clearing long-running cases rather than faster handling of typical requests.

CORE COMPETENCIES & SKILLS

Programming: SQL, Python, R
Data Visualization & BI: Tableau, Power BI, Excel, Google Sheets
Data Platforms: Snowflake, Databricks, MySQL, SQL Server, Oracle, Google Analytics 4 (GA4)
Statistics & Analytics: A/B Testing & Experimentation, Hypothesis Testing, Regression (Linear, LASSO), Predictive Modeling, Time Series Forecasting, Customer Segmentation, Clustering, Churn Modeling
GenAI & Engineering: Machine Learning, LLMs, RAG Pipelines, LangChain, Kubernetes, ELK Stack (Elasticsearch, Kibana)
Certifications: Tableau Desktop Foundations (Salesforce Certified), Databricks Fundamentals (Databricks), Hands-On Essentials: Data Warehousing Workshop (Snowflake), Google Analytics Certification (Google Digital Academy)
